SUPPORT FOR YOUR BUSINESS, BRAND & PRODUCT

1

marmorin

Marmorin is a European B2B manufacturer of washbasins, bathtubs, shower trays, and kitchen sinks. We specialize in private-label and ODM/custom design products manufactured with advanced casting technologies and innovative materials. With over 33 years of experience and technological know-how, Marmorin is a reliable partner that supports Your business, brand, and product.

ABOUT MARMORIN

Marmorin was established in 1985 in Poland. From the very beginning, the casting technology was at the core of our manufacturing strengths. The company started by producing window sills and coffee tables from cast marble. After a couple of successful years, new emerging needs on the market encouraged us to shift and entirely concentrated on bathroom and kitchen sectors. Within years, production capabilities grew along with product offering. Washbasins, bathtubs, shower trays and kitchen sinks of various types, sizes and designs have become the cornerstone of our production. Today, Marmorin is a global player on the B2B market of casted goods manufacturing thousands of products each year.

BUSINESS TO BUSINESS APPROACH

Marmorin has become one of the most effective B2B producers for many local and international brand companies. We focus on providing complete service on each step of cooperation. Whether your project is for the furniture sector, investment or high-end custom design we always strive to be your trusted partner and creative problem solver. Our aim is to create an exclusive business relationship with each customer. A relation that is based on trust, support and technical expertise - values which only combined, guarantee successful product and long-term partnership.

We offer three main types of cooperation: OEM offering with a huge number of ready-to-buy products; ODM services provided by R&D Department that supports, develops and manufactures Customer's designs. However, one of the most unparalleled advantages over the competition is our in-house design team, Marmorin Design Studio that can develop the whole project from a concept to a final product manufactured especially for Your brand.

MARMORIN STRENGTHS & FIGURES

- MORE THAN 33 YEARS OF EXPERIENCE
- STRONG B2B CONFIDENTIALITY POLICY
- SHORT AND LONG PRODUCTION RUNS
- IN-HOUSE R&D DEPARTMENT
- 4 INNOVATIVE MATERIALS
- INTERNAL DESIGN STUDIO
- CERTIFIED TESTING LABORATORY
- 2 INDEPENDENT MANUFACTURING PLANTS
- OVER 150 CUSTOMERS WORLDWIDE
- 80 % OF PRODUCTS ARE EXPORTED
- 8 PRODUCTION LINES
- 150 THOUSAND PIECES PRODUCED IN 2018
- 4 INNOVATIVE MATERIALS
- OVER 250 EMPLOYEES

OEM OFFER*

PRODUCTS READY FOR YOUR BRAND

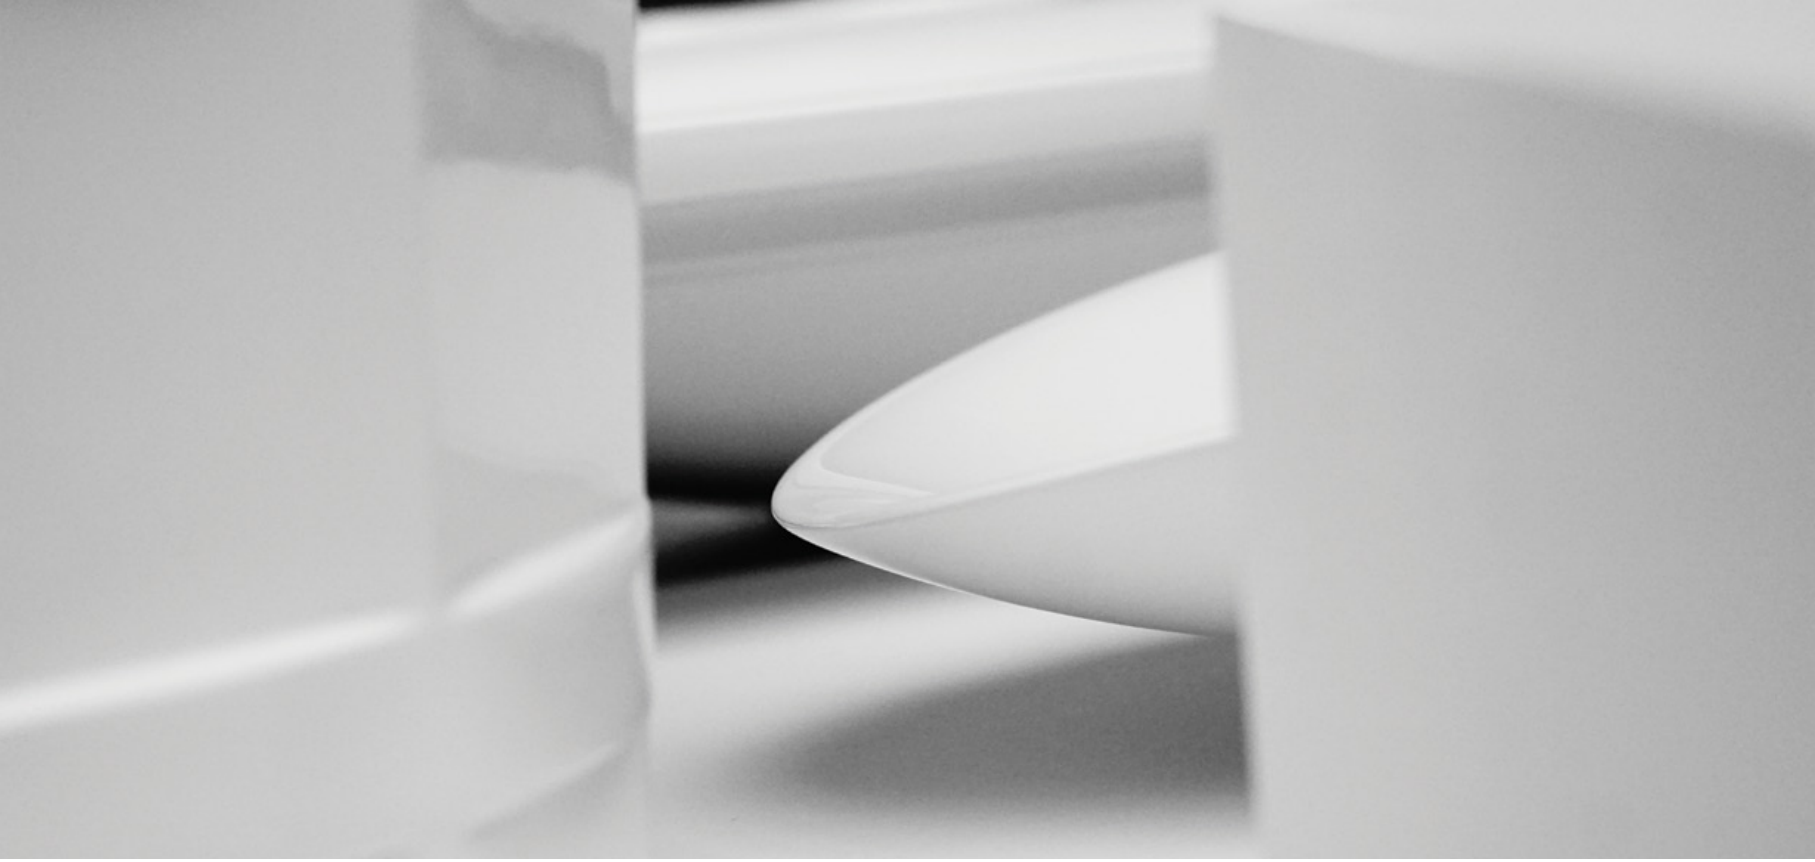

OEM (Original Equipment Manufacturer) offer is a perfect solution for any customer who requires ready-for-sell private-label products for bathroom or kitchen. Our white-label portfolio consists of washbasins, bathtubs, shower trays and kitchen sinks of various sizes, designs, and functional parameters. This type of products is especially favorite among furniture manufacturers that seek plumbing fixtures for their end products.

The main benefit of OEM products is the lack of implementation process since the mold has already been constructed and optimized for mass production. Additionally, in individual cases and at special customer's request, it might be possible to make slight modifications to pre-made products. There are a couple of types of cooperation possible, from acquiring a selected model for sole use in a specific country or region to a global exclusiveness of a whole family of products.

OEM COOPERATION PHASES

**For a complete and actual OEM offer available in Your region please contact your sales representative*

ODM OFFER

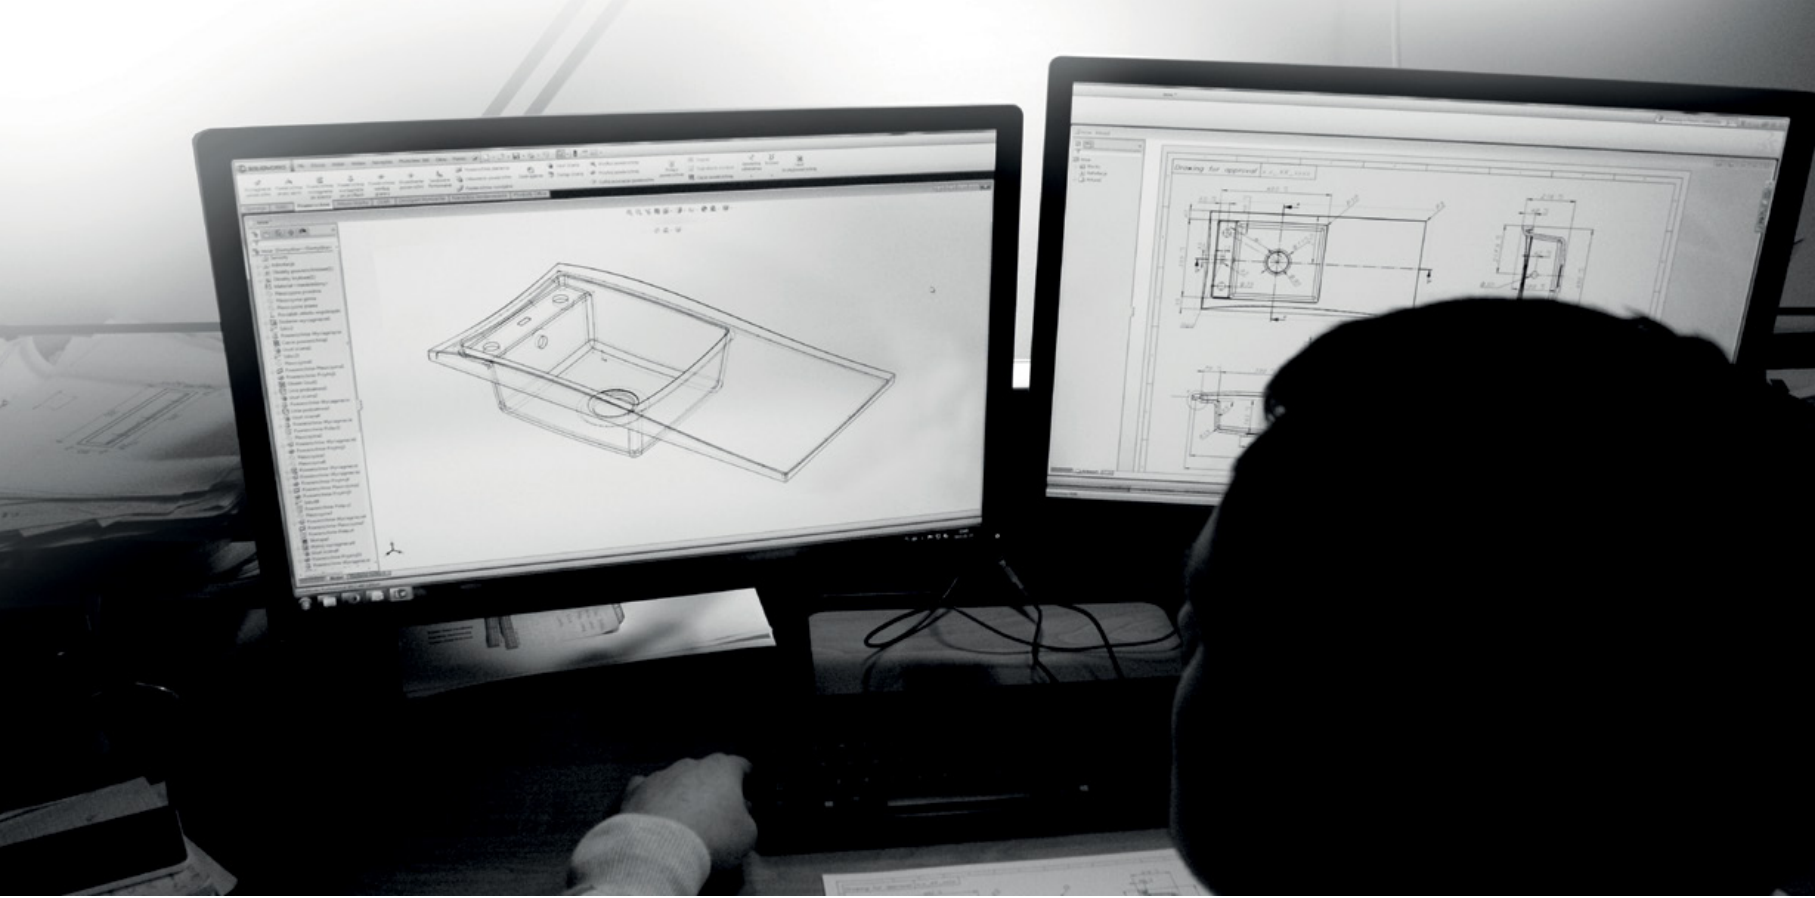

YOUR DESIGNS TRANSFORMED INTO REALITY

Marmorin is one of the most reliable ODM (Original Design Manufacturer) partner in the bathroom and kitchen sectors. We take great value in this type of cooperation and concentrate not only on providing the best product possible but also on creating an exclusive partnership between companies that set the basis for future mutual growth. We understand how sensitive this type of business relationship is and our central policy concentrates on keeping confidentiality so that your products and marketing strategies will always be safe with us.

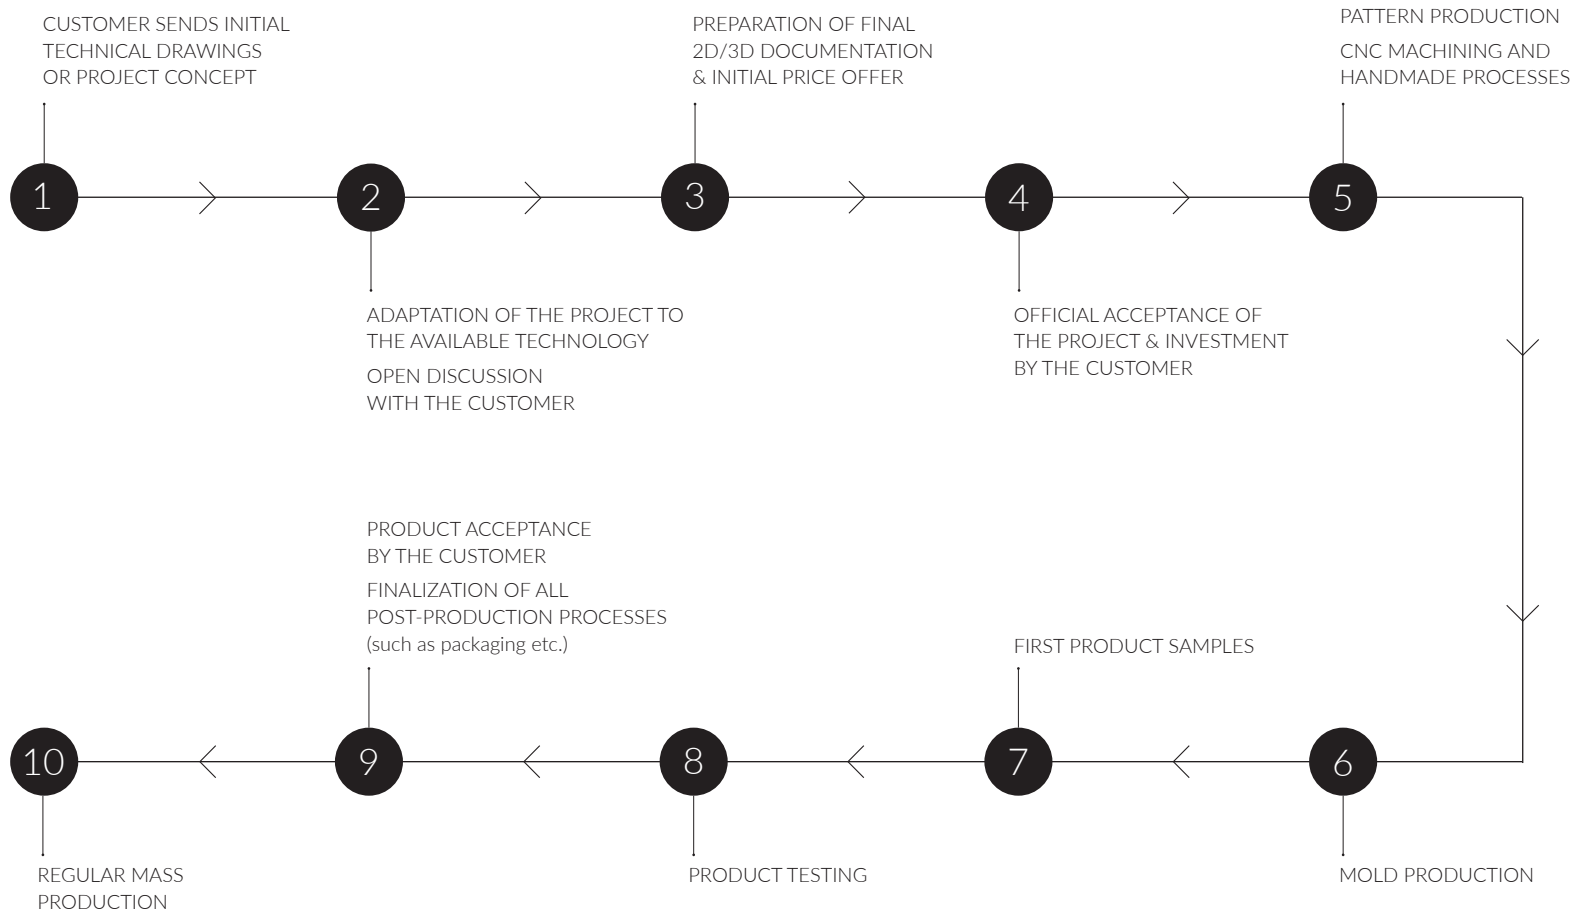

We can analyze and find solutions for every design challenge of our customer. An experienced R&D department supervises every ODM project and provides complete engineering support to ensure the feasibility and profitability of every product. We are prepared to develop washbasins, bathtubs, shower trays or kitchen sinks exactly at customer's designs and technical specifications. The whole implementation process is carried out internally, from the mold production to the final product. Depending on the customer's needs, we can make small or large product series. Before mass production, we provide the product-for-approval to ensure that customer's expectations have been met and the manufacturing process will be smooth and stable.

ODM COOPERATION PHASES

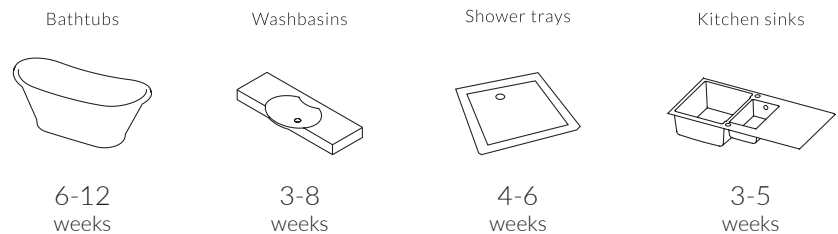

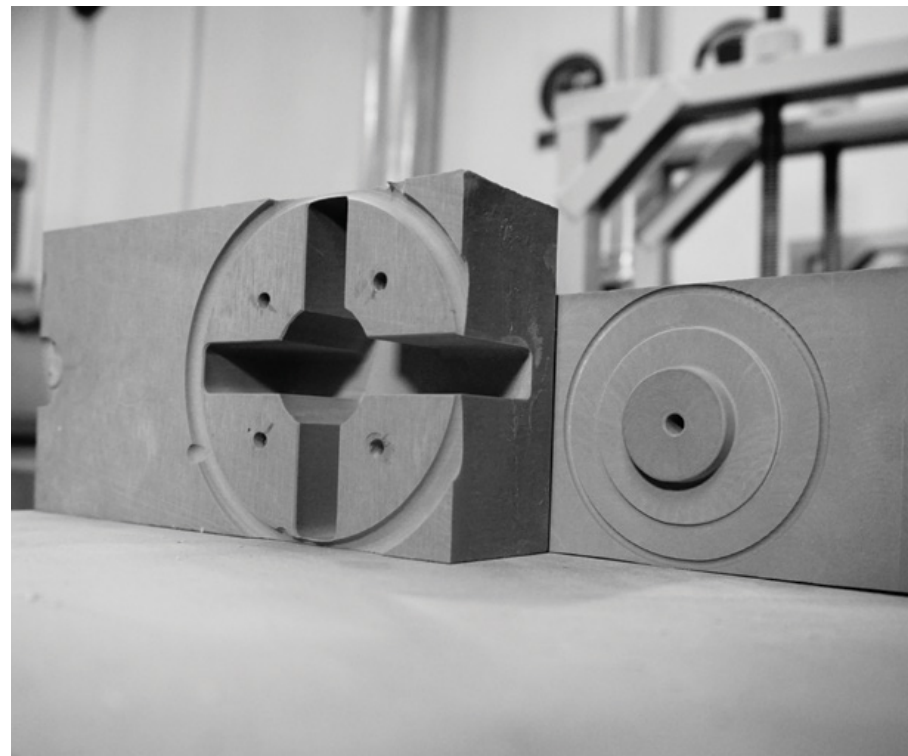

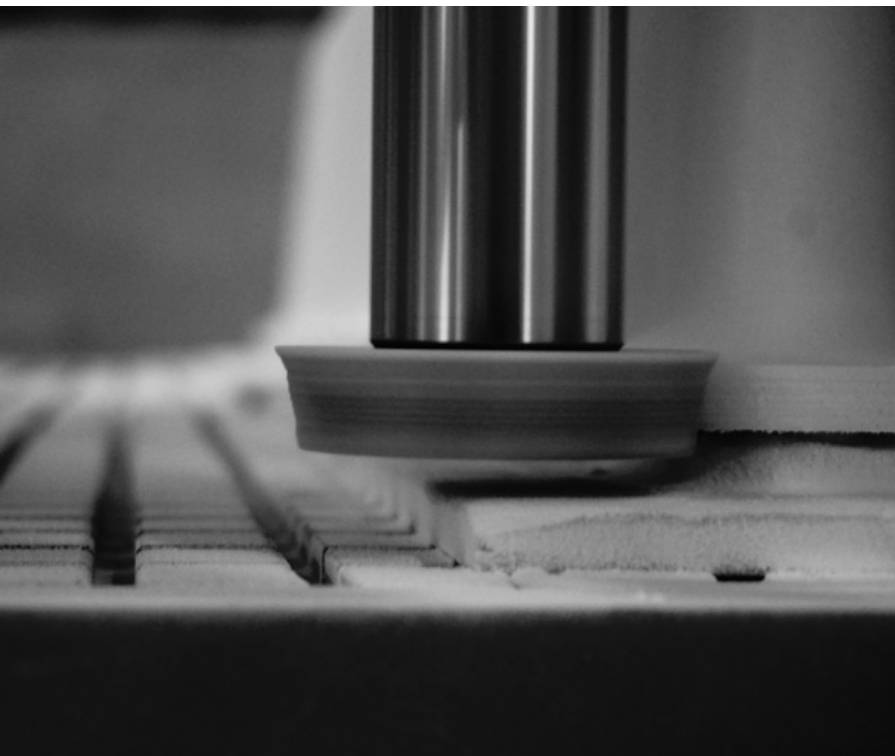

IMPLEMENTATION PROCESS

IMPLEMENTATION LEAD TIME

Many factors may influence the duration of product implementation such as size, the complexity of construction, special production requirements, etc. Each case is always analyzed individually, and a dedicated timeline is presented.

DESIGN & PRODUCTION OFFER

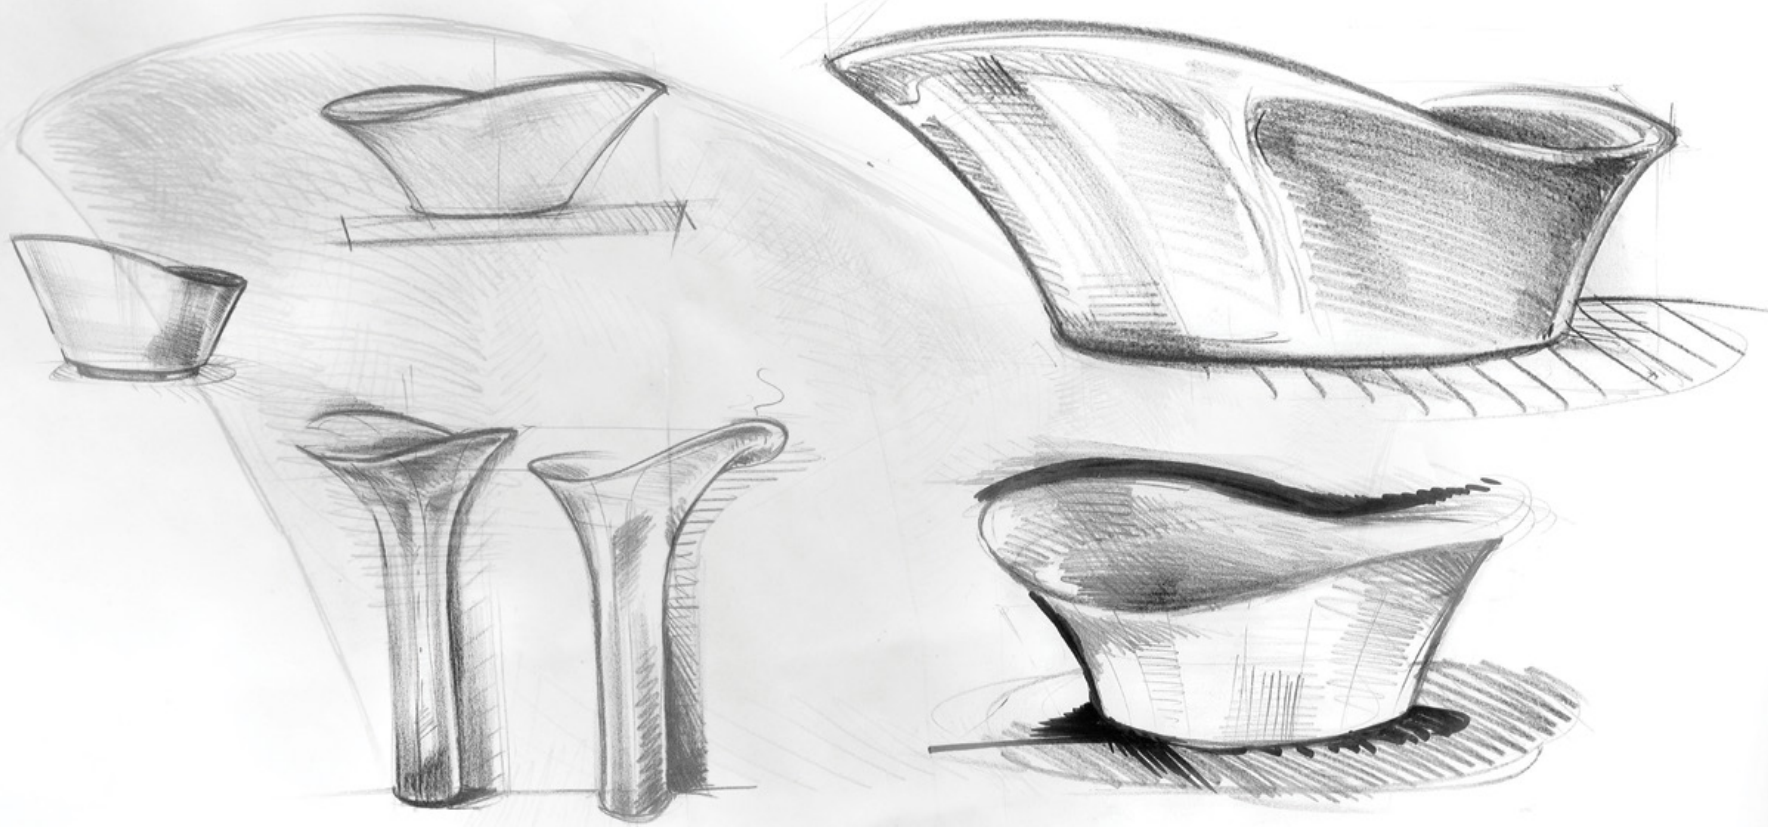

FROM DESIGN CONCEPT TO THE TANGIBLE CREATION

D&P (Design & Production) offer is the most complete service we can provide for your brand. In this type of cooperation, you can entirely rely on us not only regarding production and technical expertise, but our team will also provide creative support. Based on your preliminary design brief our designers are able to generate complete concepts for your future products. Whether a customer is in need of design inspiration or decides to outsource that part of product development our D&P offer is strong and unique solution on the B2B world market.

During the design process, Marmorin Design Studio will consider the customer's requirements, current design trends, ergonomics, functionality, and profitability in order to create the most meaningful project. Our designers are an integral part of the whole company, so we guarantee that our design propositions will be fully feasibility and most optimized for our technology.

R&D DEPARTMENT

OUR DEPARTMENT FOR YOUR PRODUCT DEVELOPMENT

Marmorin Research & Development Department is responsible for every product implementation. The team of specialists is supervising entire process of customer's product development from concept drawings to the finished product. Our engineers conduct precise preliminary analysis of the project and eliminate any potential construction flaws. Through the use of 3D CAD modeling software, the product is adjusted to meet the manufacturing requirements and is prepared for a master pattern production. The team can advise you in every critical design or technical decision. Marmorin R&D Department is dedicated to be an extension of your company so that working on new products will be always an easy and comfortable process.

DESIGN TEAM AT YOUR DISPOSAL

Marmorin Design Studio offers a successful mix of services including designing, consulting and problem analyzing, all available under one roof where the design process can be conducted from an idea to a final product. We provide professional product design services creating products based on customer's project brief or even just a basic idea. We understand how important is the brand image. Our designers can provide you with design consulting, support in marketing decisions and supplementary graphic materials all as a complete design solution for your brand. Furthermore, the team is regularly developing a huge number of new products in order to enlarge and keep Marmorin OEM portfolio up to date and consistent with current trends.

OUR MATERIALS, YOUR PRODUCTS

MINERALICAST®

CAST DOLOMITIC MARBLE

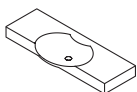

MINERALICAST® is a material with a long history within our company and a huge list of satisfied customers all around the world. Developed 33 years ago and constantly improved over time, MINERALICAST® is one of the most reliable and unique cast material on the market. The main component of the material is powdered dolomitic marble that consists of 96% calcium magnesium carbonate, which is a natural mineral, known as "dolomite" - $\text{CaMg}(\text{CO}_3)_2$. The powder is produced by disintegrating and purifying genuine dolomitic marble, which is a metamorphic rock formed by natural transformation (metamorphism) and estimated to be over 500 million years old.

During the production process, the powdered dolomitic marble is mixed with dedicated resin creating a strong casting filler. The external surface of each casted product is covered by one of our exclusive sanitary gelcoat coatings for perfect surface finish and performance. This combination of material components creates unique composite material - MINERALICAST®. Its chemical and physical properties allow manufacturing high-quality products of almost unlimited shapes and effective technical and functional features. We offer various coatings each dedicated to different product characteristics and designation.

Shower trays

MINERALICAST® STM

MINERALICAST® STM is a foundation in our cast dolomitic marble offer which characterizes itself with a very satisfactory quality-price ratio. Final products are delivered with a flawless high glossy surface available both in pure white or pure black. Washbasins, bathtubs and shower trays made of MINERALICAST® STM are characterized by longevity, hygiene, and easiness of cleaning, features that are essential in everyday use. Additionally, it is possible to apply custom shades of white or other selected colors from the RAL color spectrum.

MINERALICAST® DURO

MINERALICAST® DURO offers increased resistance to surface abrasion and stronger rebound hardness. Product external surface is also more resistant to chemical agents. Features useful in both domestic and public spaces. Unique chemical and physical properties of MINERALICAST® DURO ensure great reliability in manufacturing complex shapes of products which is an important factor in large-scale production.

MINERALICAST® MAT

It is a powerful alternative to matte solid surface products. Our specially developed gelcoat layer, dedicated for matte “soft-feel” finish, makes products warm and pleasant to the touch - characteristics commonly associated with the solid surface. The great benefit of this material solution is the thick gelcoat layer which ensures longevity and renewability of the surface. MINERALICAST® MAT offers the same surface characteristics as ATH-based compounds but at a more accessible price range.

MONOCAST®

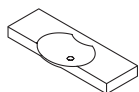

PURE SOLID SURFACE

MONOCAST® is a pure solid surface material that has been produced by Marmorin for over 15 years. It is a uniform and homogenous, ultra-white mass obtained by combining high quality and clean Aluminum Trihydrate (ATH) with carefully selected highly resistant resin. MONOCAST® is 100% solid all the way through the entire product, non-porous and void-free with exceptional surface finish. Marmorin is among very few manufacturers that fully mastered production of casted solid surface bathroom products. Whether, it is a small, medium or large scale production we can provide our customer with the same high-quality product. There are almost no limits in terms of shapes, complexity or sizes for products made of MONOCAST® which makes it a perfect solution for demanding projects.

MULTICAST®

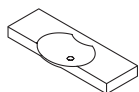

ULTRA-LIGHT COMPOSITE

MULTICAST® is a unique composite material that combines both extraordinary durability and exceptional lightness. It is based on a special formula of the filler, developed by Marmorin R&D Department, which allows manufacturing products much lighter than cast stone equivalents without sacrificing longevity and durability. The external surface of the product is covered by a durable gelcoat coating for excellent surface performance available in glossy or matte finish. MULTICAST® has its own dedicated production line and is completely manufactured by Marmorin. The material is especially dedicated to large size washbasins and bathtubs with or without integrated overflow.

MAGRANIT®

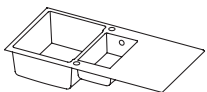

CAST QUARTZ STONE

MAGRANIT® is our unique material solution engineered especially for the production of casted kitchen sinks. The material is made primarily of pure and natural quartz which makes it very strong and durable. The quartz aggregate is bounded together with dedicated resin and additional refining compounds creating material dedicated to the kitchen environment. MAGRANIT® products have uniform void-free structure and perfect surface finish ensures a high level of hygiene cleanability. Chemical and physical characteristics of the material allow for casting products of various shapes and sizes. From small and compact solutions to large sinks. In addition, the material comes in a wide range of color options, from cold to warm tones.

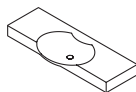

MAGRANIT® FOR WASHBASINS

Although Magranit is a perfect solution for the kitchen, the material can also be used in the bathroom. Washbasins made of Magranit not only share durability and resistance of kitchen sinks but bring unique aesthetic in any style of a bathroom environment. A selection of sinks is offered in a wide color pallet of Magranit.

CHAPTER

OUR TECHNOLOGY, YOUR SUCCESS

PATTERN & MOLD PRODUCTION

At the core of our manufacturing capabilities, there are an internal master pattern and mold production facilities for both bathroom and kitchen products. There is no outsourcing of the tooling production in Marmorin. We have our own, time-proven and reliable technology that allows us to create molds of all variety of complexity. From simple two-parts constructions to the most complex multi-part molds for the most demanding products. In-house mold manufacturing ensures complete control over the production process and guarantees a very fast implementation of a new product. Additionally, our experts are capable to manually modify and enhance a mold pattern even after CNC machining has been finished which results in great flexibility during product development.

EXPERTS IN CASTING TECHNOLOGIES

For more than 30 years Marmorin has been producing casted products. We have not just fully mastered the technology but also become a pioneer in improving production processes and developing new material solutions. From cast dolomitic marble, solid surface to innovative light composites we understand the benefits and challenges of different materials. Constantly researching we keep ourselves updated with the most current changes in casting technologies. As a result, we provide our customers with the best product possible and transform their desires into reality.

MANUFACTURING SOLUTIONS

Thanks to decades of experience and teams of specialists through every department of the company we are capable of manufacturing solutions to the most challenging problems. The time has shown that in many cases customers come back to us because no other company can produce such difficult products or find a solution to technically complex innovations demanded by the market. Whether it is 8 or 80 mm wall thickness, integrated overflow, complex product shape or dimensional repeatability we love challenges, and we are not afraid of taking on the difficult task. Equipped with know-how and state of the art technology we can provide you with the right material, molds and production processes for your products.

From simple to the most complex shapes

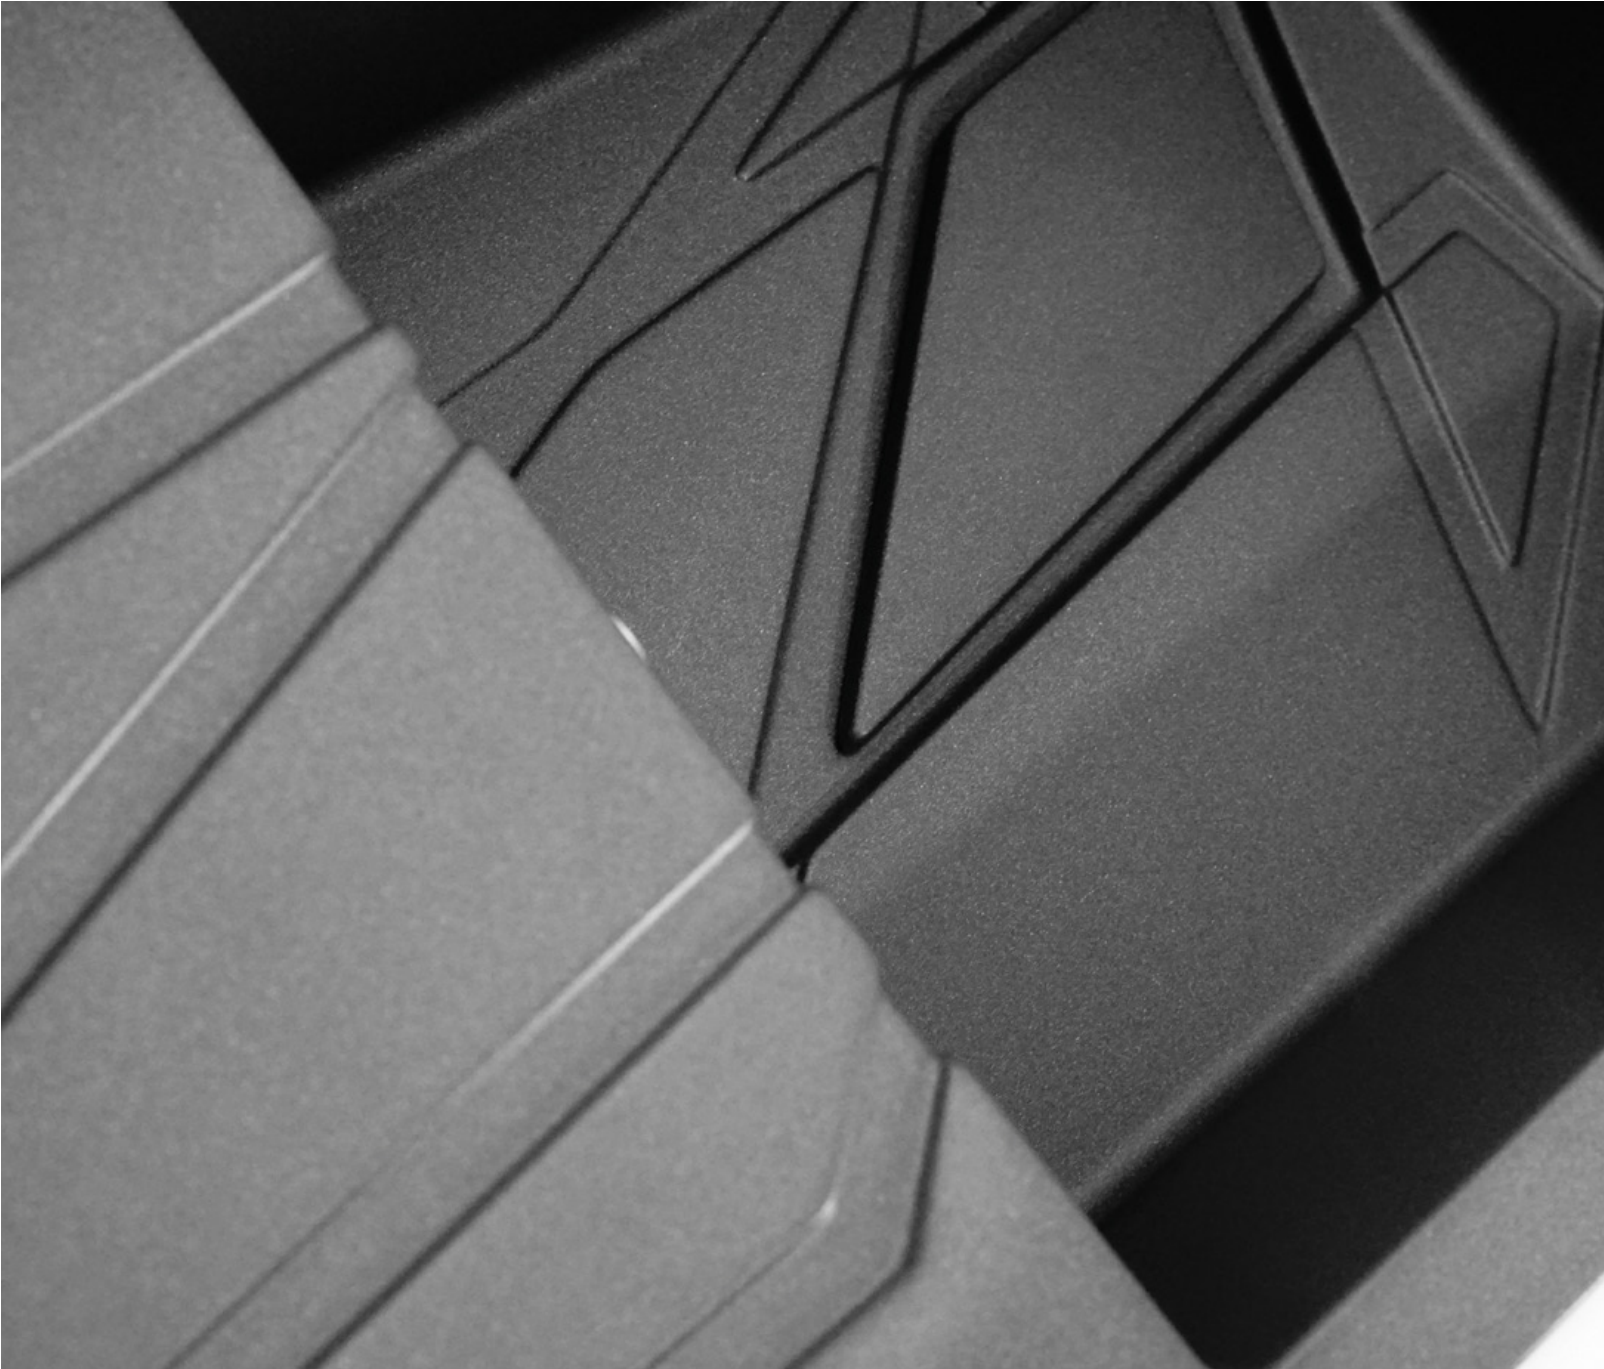

Integrated slotted and circular overflow systems

High resolution of surface details

Precision and attention to details

Integrating additional functional components into a casted product

Geometric and organic surface patterns

HAND-FINISHED SURFACE

The key to the exceptional surface finish of Marmorin products lies in people. For every product manufactured in our company, there is a single dedicated specialist with one simple but the most important task. To ensure the perfect surface quality and finish. It is true that we strive for more and more advanced production technologies but long ago we understood that no machine can equal people's passion and dedication for their work. The balance between technology and human involvement is our secret to achieving the best product possible. We are proud to say that the goods we produce are technologically hand-crafted.

100% PRODUCT QUALITY CONTROL

Every product goes through a strict and mandatory quality control process. Controllers verify numerous variables such as dimensional stability, required tolerances, surface flatness, construction straightness, the location of tap holes, surface quality and many more. All Marmorin quality assurance standards are in compliance with ISO 9001. In addition, when necessary additional in-house guidelines are established to meet the most demanding and individual customer's quality requirements. Furthermore, quality inspections are not just limited to products but focus as well as on packaging, labeling, complementary equipment, monitoring of non-conformances etc.

POST-PRODUCTION SERVICES

Besides manufacturing, we also concentrate on providing many post-production services that complete your product and enrich customer's brand image. A sophisticated laser robot can engrave products with durable and long-lasting custom logotype or other graphic elements. Our packaging department will supplement your products with any necessary additional equipment, installation instructions, technical documentation, and labels. Each product is carefully packed in protective and dedicated packaging ready for local and international shipment.

CONTINUOUS MATERIAL & PRODUCT TESTING

In charge of the quality management is an in-house laboratory, holding a TÜV Rheinland Poland Certificate, and technology department. The lab inspects each delivery of raw materials, evaluate material properties during regular production and control material formulas. At an early stage of product implementation, the team assists in choosing optimal production technology and at a later phase of the project conduct physical, chemical and mechanical tests on the final products and analyses the compliance with the existing norms, including European and the United States standards.
